

## GBI Pioneers Mobile Butane Treatment System

*GBI personnel conducting hot-spot treatment using a Portable Butane Treatment System at an independent Mobil retailer located in Winthrop, Massachusetts*

---

Global BioSciences, Inc. (GBI) has developed and field-tested a portable butane treatment system. The portability or mobility allows GBI personnel to conduct hot-spot treatment and butane treatment at small release Sites. This new remediation flexibility allows GBI to conduct soil and groundwater treatment in tightly settled or built-up areas by utilizing existing monitoring wells as butane injection wells. For hot-spot treatment, the mobile butane treatment system will significantly lower capital costs for injection well installation.
